

Name: _____ Roll.no. _____ Date: _____

A. Complete the following script while listening to the audio/watching the video.

But then came my 90-page senior 1) _____, a paper you're supposed to spend a year on. And I knew for a paper like that, my normal 2) _____ was not an option. It was way too big a project. So I planned things out, and I decided I kind of had to go something like this. This is how the year would go. So I'd start off 3) _____, and I'd 4) _____ up in the middle months, and then at the end, I would kick it up into 5) _____ just like a little 6) _____. How hard could it be to walk up the stairs? No big deal, right?

But then those middle months actually went by, and I didn't really 7) _____ words, and so we were here. And then two months turned into one month, which turned into two weeks. And one day I woke up with three days until the 8) _____, still not having written a word, and so I did the only thing I could: I wrote 90 pages over 72 hours, 9) _____ not one but two 10) _____ humans are not supposed to pull two all-nighters – 11) _____ across campus, dove in slow 12) _____, and got it in just at the deadline.

No, no, it was very, very bad. Anyway, today I'm a 13) _____ guy. I write the blog Wait But Why. And a couple of years ago, I decided to write about 14) _____. My behavior has always 15) _____ the non-procrastinators around me, and I wanted to explain to the non-procrastinators of the world what goes on in the 16) _____ of procrastinators, and why we are the way we are. Now, I had a hypothesis that the brains of procrastinators were actually different than the 17) _____ of other people. And to test this, I found an 18) _____ lab that actually let me scan both my brain and the brain of a proven non-procrastinator, so I could compare them. I actually brought them here to show you today. I want you to take a 19) _____ to see if you can notice a difference. I know that if you're not a trained brain expert, it's not that obvious, but just take a look, OK? So here's the brain of a 20) _____.

And to the Monkey, humans are just another 21) _____. You have to keep 22) _____, well-fed and propagating into the next generation, which in 23) _____ might have worked OK. But, if you haven't noticed, now we're not in tribal times. We're in an 24) _____, and the Monkey does not know what that is. Which is why we have another guy in our brain, the 25) _____, who gives us the ability to do things no other animal can do. We can 26) _____ the future. We can see the big picture. We can make long-term plans. And he wants to take all of that into account. And he wants to just have us do whatever 27) _____ to be doing right now.

Now, sometimes it makes sense to be doing things that are easy and fun, like when you're having dinner or going to bed or enjoying 28) _____ time. That's why there's an 29) _____. Sometimes they agree. But other times, it makes much more sense to be doing things that are harder and 30) _____, for the sake of the big picture. And that's when we have a conflict. And for the procrastinator, that conflict tends to end a certain way every time, leaving him spending a lot of time in this orange zone, an easy and fun place that's entirely out of the 31) _____ circle. I call it the 32) _____.

Post Listening: Write the answers for the following questions on the backside of the paper.

- i. How did Tim Urban plan to do his thesis? And what were the results?
- ii. What hypothesis did the writer-blogger guy have about the brains of procrastinators?
- iii. What did the writer-blogger guy compare in an MRI lab to test his hypothesis?
- iv. What is the name of the part of the brain that the writer-blogger guy refers to as the "Rational Decision-Maker"?
- v. How does the writer-blogger guy describe the conflict within the brain between the Monkey and the Rational Decision-Maker?
- vi. According to the writer-blogger guy, where does the procrastinator spend a lot of time?
- vii. In what kind of times does the Monkey's approach of being well-slept, well-fed, and propagating into the next generation work well?
- viii. Why does the writer-blogger guy believe that humans have an advantage over other animal species?
